

Bisman Radiator Works Inc.

2945 Twin City Drive ~ Mandan, ND 58554

Phone: 701-663-7896 ~ Fax: 701-663-1606

Heat Transfer Sales & Repair ~ A/C Parts & Supplies ~ Automotive Lighting

Custom Made Specialty Radiators

"DURACOO" Radiators Bolt-on Radiators that replace plastic/aluminum radiator and frame

Upgrade your truck to our new line of Duracool all in one bolt-on integrated radiator and frame that replaces plastic/aluminum radiators and frames, extending years of service resulting in less down time. These radiators are proving to be even more durable than Solder together radiators that still utilize the original frames. We can also custom build these radiators with our "Dirt Buster", or "High Performance" core. Now available in Freightliner, Kenworth and Peterbilt with more models to come.

"DIRT BUSTER" Radiators built to stay cool in dirty conditions

Our "DIRT BUSTER" line of radiator and charge air coolers are designed with dirty conditions in mind. No matter if it's construction, agriculture, oil field, feedlot or silage equipment we can help you design a system that is right for you. We have designed these radiators and charge air coolers to keep the air flowing while minimizing dirt buildup in the fins and tubes. We can also build "DIRT BUSTER" cores for your existing copper and brass radiator.

"HIGH PERFORMANCE" Radiators for Heavy Haul and High Horsepower Applications

Just adding more rows does not necessarily make a radiator cool better. That's why we have designed our "HIGH PERFORMANCE" radiators for optimum cooling efficiency and airflow utilizing our own tube and fin design. We are able to increase cooling efficiency by up to 20% over standard radiators while also lowering the overall coolant temperature on high horsepower and heavy haul applications.
